

ISMS POLICY: CYBER ATTACK AND DATA SECURITY

At Engineers Mate Limited we are very aware that, in today's business environment, we must protect against a myriad of constantly changing attack methods including hijacked systems, stolen credentials, rogue insiders, ransom ware, malware, fraud and compliance failure.

On top of this there is also the potential problem of employee ignorance which can lead to unintentional security breaches.

Our IT services partner, provides a high level IT security for our business and provides for us IT systems in a protected, secure environment. Their cyber defences protect businesses from the potential devastation of an attack from cyber criminals. This includes defending our finances, identity, reputation, data and our customers' and supplier's confidential information.

We meet regularly with our IT partner(s) to constantly review our changing needs which are affected by the ever developing threats from the criminal world.

We feel responsible to work with our IT providers to try our best to minimise the threat to our company, customers, suppliers and employees of these potentially dangerous attacks.
